

Antenna Tuning Units (ATU) R&S®FK2100 and R&S®FK2100M

For automatic matching of all commonly used antennas

Brief description

The Antenna Tuning Unit R&S®FK 2100 belongs to the R&S®XK 2000 equipment family. It automatically matches antennas, in particular very short antennas, to the 150 W HF Transceiver R&S®XK 2100. The sturdy and water-proof plastic casing of R&S®FK 2100 is shock- and UV-resistant and thus ideally suited for mobile applications. The R&S®FK 2100M, which is a seawater- and drop-resistant version of the R&S®FK 2100, is especially designed for shipboard applications and can match antennas with very low ohmic resistance.

Particular attention was paid to obtaining effective lightning protection. Both ATUs are fully arc-protected against direct lightning strokes. They are tested to withstand arcs of 10 kV/10 kA. An automatic BIT (built-in-test) is provided for fault detection and reporting to the R&S®XK 2100 transceiver.

Tuning functionality

For the R&S®FK 2100, a maximum of 100 customer-defined channels can be stored in a non-volatile memory. The stored channels can be even called up in silent mode, i.e. without emission of RF power.

The R&S®FK 2100M offers silent tuning capability over the full frequency range of 1.5 MHz to 30 MHz.

Before the ATU can be used for an application, it must be connected to an antenna to "learn" its characteristic. Learning takes place in a user-defined frequency range in the HF band (1.5 MHz to 30 MHz).

The ATU "learns" the antenna characteristic by receiving tuning data for a maximum of 1500 predefined frequencies. Once the tuning data for these frequencies is known and stored, the typical ATU setting time is less than 30 ms. The advantage for the user is the low probability of intercept (LPI), since ATU frequency setting takes place very quickly and without any emission of RF power.

With a single cable between transceiver and ATU carrying RF, supply voltage and all bidirectional control data, the R&S®FK 2100M is very installation-friendly.

Shockmount R&S®KS 2110

(for R&S $^{\circ}$ FK 2100 and R&S $^{\circ}$ FK 2100M)

For extremely harsh environmental operating conditions, a rugged shockmount is available for the ATU.

Typical applications of the R&S®KS 2110 are installations on board small ships or in armored vehicles.

Specifications of the R&S $^{\circ}FK\,2100M$

Frequency range	1.5 MHz to 30 MHz
Antennas Whip antennas Rod antennas Long-wire antennas Shortest antenna	lengths from 5 m to 8 m from 7 m to 12 m up to 15 m 3 m whip with duty cycle 1:1
Tuning time	<30 ms
ATU control cable	1 coax cable carrying RF, control information and supply voltage
VLF output	N connector

General data

dollorar adda		
Environmental conditions		
Operating temperature range	-30°C to $+65^{\circ}\text{C}$ in line with MIL-STD-810D, meth. 501.2/502.2	
Storage temperature range	-40°C to $+85^{\circ}\text{C}$ in line with MIL-STD-810D, meth. 501.2/502.2	
Vibration	6 g rms, 3 minutes per axis in line with MIL-STD-810E, meth. 514.4, proc. 1, cat. 10, Figure 514.4-16, MIL-STD-810D, meth. 514.3, proc. 1, Figures 514.4-3-34 and 514.4-3-36 and BV 0440, diagram 1	
Shock	40 g, 18 shocks in 2 \times 3 axes in line with MIL-STD-810E, meth. 516.4, proc. 1, Figure 516.4-1 40 g/11 ms, 18 shocks in 2 \times 3 axes, ½ sine in line with MIL-STD-810C, meth. 516.2, proc. III, Figure 516.2-2	
Safety class	IP 40050/IP 56	
EMC, emission, immunity	in line with EN 50081-1, EN 50082-1	
Lightning protection	VG 96903, T76	
Solar radiation	in line with MIL-STD-810E, meth. 505.3, proc. II	
Salt fog	in line with MIL-STD-810D, meth. 509.2, proc. II	
Fully seawater-proof (partly submersible)		
Fungus-protected
